DHANUSH YADAV JANGITI

Hyderabad, India | 9391647335 | Dhanushyadav.jangiti@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

B.Tech graduate in Artificial Intelligence and Data Science with hands-on experience using SQL, Python, and Power BI to analyze financial and transactional data across multi-table relational databases. Skilled in advanced SQL (joins, CTEs, window functions, subqueries) to uncover trends in account balances, payment flows, and transaction activity, and in translating those findings into clear, decision-ready reports. Experienced in cleaning and validating large datasets, resolving data-quality issues, and building KPI-driven dashboards in Power BI and Excel. Currently building statistical and machine learning skills with Scikit-learn to support risk and fraud analytics, with a focus on turning raw transactional data into measurable business insight.

Key Strengths: SQL query optimization • Data cleaning & validation (5,000+ records) • KPI dashboard design (8+ metrics) • Cross-table relational analysis (7+ tables)

CORE SKILLS

Programming & Analysis: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL (Joins, CTEs, Window Functions, Subqueries, Query Optimization)

Databases: SQL Server (SSMS), MySQL, Oracle, MongoDB, SQLite

BI & Reporting: Power BI (DAX), Tableau, Excel, KPI Development, Dashboard Design

Statistics & Analytics: Inferential statistics, hypothesis testing, time-series analysis, customer segmentation

Data Engineering: Data Cleaning & Validation, EDA, ETL/ELT, Data Modeling, Trend Analysis

Tools & Frameworks: Git/GitHub, VS Code, Jupyter/Colab, Django, FastAPI, REST APIs

PROJECTS

Bank Customer Data Analysis — *SQL Server*

Independent project analyzing a simulated multi-table banking schema for production-style SQL reporting.

- Analyzed banking data across **7 relational tables** and **5,000+ customer records**, covering profiles, balances, relationships, transactions, messages, and interest rates. Delivered business-ready reports.
- Wrote **11 SQL business queries** using joins, subqueries, aggregate functions, and date filters, cutting manual balance-checking time by **~30%**.
- Fixed missing balance records with CASE-based rules that recalculated balances from transaction history, resolving **~15%** of records with data gaps and improving downstream reliability.
- Mapped transaction behavior across **4 account types** (Savings, Recurring Deposits, Credit Cards, Add-on Credit Cards). Linked account relationships for accurate reporting.
- Documented schema relationships and query logic in a shared reference guide, reducing onboarding time for new queries by an estimated ~20%.

PhonePe Pulse Data Analytics Dashboard — *SQL Server, Power BI, Excel, DAX*

End-to-end analytics project using the public PhonePe Pulse dataset with a stakeholder-facing Power BI dashboard.

- Analyzed **130,000+ transaction records** across **5 service categories** (payments, insurance, loans, money transfer, recharge & bills). Generated business insights.
- Built SQL queries using CTEs and window functions to clean and reshape 130,000+ raw records before loading into Power BI. Broke down transaction trends, service performance, and customer activity over 12+ months.
- Tracked **5 core KPIs**: total transaction amount, transaction volume, success/failure rate, monthly trend, and service adoption, surfacing a **~10%** variance in success rates across services.
- Delivered an interactive Power BI dashboard with **8+ KPI cards** and DAX measures, cutting manual reporting effort by **~40%** for stakeholders.
- Structured the data model and DAX measures for reuse, enabling faster updates as new transaction data arrived.

EDUCATION

Siddhartha Institute of Engineering and Technology (Autonomous), Puttur, India 2022 – 2026
Bachelor of Technology, Computer Science and Engineering (AI & Data Science) — CGPA: 8.14

Himaja Junior College (Board of Intermediate Education, AP) 2020 – 2022
Intermediate (12th) — Score: 82%

CERTIFICATIONS

- Introduction to Data Analytics — foundations of data analysis workflows and reporting.
- SQL Skill Up — advanced querying, joins, and database fundamentals.
- Python Skill Up — core Python programming for data analysis.
- Django Skill Up — web application development with REST APIs.
